

# DDIS - Distributed Databases and Information Systems

## DDIS - Distributed Databases and Information Systems

---

General information	
<b>Module Code</b>	DDIS
<b>Unique Identifier</b>	DistDBInfSys-01-MA-M
<b>Module Leader(s)</b>	Prof. Dr. Ehlers, Jens (jens.ehlers@haw-kiel.de)
<b>Lecturer(s)</b>	Prof. Dr. Ehlers, Jens (jens.ehlers@haw-kiel.de)
<b>Offered in Semester</b>	Sommersemester 2026
<b>Module duration</b>	1 Semester
<b>Occurrence frequency</b>	Regular
<b>Module occurrence</b>	In der Regel im Sommersemester
<b>Language</b>	Englisch
<b>Recommended for international students</b>	Yes
<b>Can be attended with different study programme</b>	No

Curricular relevance (according to examination regulations)
Study Subject: M.Sc. - MCS - Computer Science (PO 2023, V1) Module type: Pflichtmodul Semester: 1, 2
Study Subject: M.Sc. - MIE - Information Engineering (PO 2022, V3) Module type: Wahlmodul Semester: 1, 2, 3

Qualification outcome
<i>Areas of Competence: Knowledge and Understanding; Use, application and generation of knowledge; Communication and cooperation; Scientific self-understanding / professionalism.</i>
- Students know different data models, APIs and query languages for database systems and can select an adequate database system depending on the application scenario.
- Students can setup a distributed database system and configure it regarding aspects of replication, partitioning, and consistency. They understand the implications of their configuration choices.
- Students can differentiate components for batch and stream processing.
- Students can express their opinion in technical discussions regarding databases.
- Students can discuss design decisions for a distributed information system in a team.
- Students can evaluate and compare different distributed database systems, particularly regarding performance aspects and TCO.

Content information	
<b>Content</b>	<ul style="list-style-type: none"> <li>- Horizontal scalability and the CAP theorem</li> <li>- Replication in distributed databases</li> <li>- Partitioning in distributed databases</li> <li>- Challenges caused by delayed network delays, clocks, and process pauses</li> <li>- Transactions, consistency, and consensus</li> <li>- Distributed batch and stream processing</li> <li>- Benchmarking of selected distributed database systems</li> <li>- Database-as-a-service in public cloud platforms</li> </ul>

<b>Literature</b>	<ul style="list-style-type: none"> <li>- Martin Kleppmann: Designing Data-Intensive Applications – The Big Ideas Behind Reliable, Scalable, and Maintainable Systems; O’Reilly</li> <li>- Tyler Akidau, Slava Chernyak, Reuven Lax: Streaming Systems – The What, Where, When, and How of Large-Scale Data Processing; O’Reilly</li> <li>- Alex Petrov: Database Internals – A Deep Dive into How Distributed Data Systems Work; O’Reilly</li> </ul>
-------------------	--

<b>Teaching formats of the courses</b>	
<b>Teaching format</b>	<b>SWS</b>
Lehrvortrag	2
Projekt	2

<b>Workload</b>	
<b>Number of SWS</b>	4 SWS
<b>Credits</b>	5,00 Credits
<b>Contact hours</b>	48 Hours
<b>Self study</b>	102 Hours

<b>Module Examination</b>	
<b>Examination prerequisites according to exam regulations</b>	None
<b>DDIS - Projektbezogene Arbeiten</b>	Method of Examination: Projektbezogene Arbeiten Weighting: 100% wird angerechnet gem. § 11 Absatz 2 PVO: No Graded: Yes

<b>Miscellaneous</b>	
<b>Recommended Prerequisites</b>	<ul style="list-style-type: none"> <li>- Knowledge about relational database modelling and transactions, HTTP and REST-APIs, version control with Git, Docker and Kubernetes</li> <li>- Familiar with command-line interfaces</li> <li>- Efficient use of at least one programming language</li> </ul>
<b>Miscellaneous</b>	Students studying Master Information Engineering can use this module as a substitute for PM101.
